ELLY MAR TAMAYOR Laboratory 3

Online Bookstore System Deployment Diagram Consider an online bookstore system where users can browse, search for, and purchase books. The system consists of the following components: Client Devices: Devices used by users to access the online bookstore, such as PCs, laptops, tablets, and smartphones. Web Server: Hosts the online bookstore website and handles user requests. Application Server: Manages the business logic of the bookstore system, including user authentication, book catalog management, and order processing. Database Server: Stores information about books, users, orders, and other relevant data. Draw a deployment diagram for the online bookstore system, indicating the distribution of components across different nodes and their connections.
